

PROJECT CASE STUDY

Norish PLC

Providing a wide range of temperature controlled logistics solutions, Norish PLC has been trading since 1975 and is part of a group with a turnover in excess of £23m. **Kellwood LED Lighting** was asked by a third party consultancy and financing company to deliver a quality-driven and competitive lighting system for six Norish distribution facilities across England and Wales.

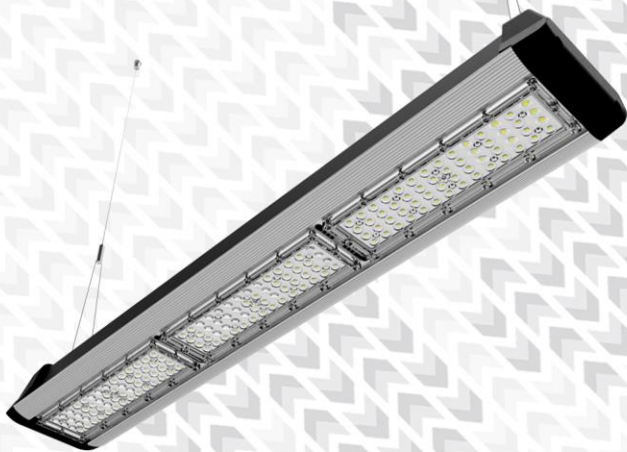

Solution

Kellwood minimised fitting variation throughout warehousing areas, ensuring improved buying power and future-proofing Norish for upgrades forecast ten years beyond point of install. Specialist optic configurations were applied throughout racking areas to ensure the maximum amount of light at ground level was delivered without excess energy usage. Initial running reductions have been excellent, particularly in the areas supported by additional intelligent control systems.
